THK - HRW RAIL AND BLOCKS

HRW 21CR

- Able to handle large loads
- Wide and flat for stable platform
- Quiet and smooth action

PRODUCT DESCRIPTION

THK's rail control HRW fits excellent for applications with high torque and low space thanks to its width and low center of gravity.

HRW takes load in all directions, which makes its application potential very large.

This rail control is of a traditional type, which means that the balls are free in the block.

We can supply as blocks and rail seperately. Rail can be cut to customer specific lengths.

TECHNICAL DATA

Dynamic load	8.02 kN
Height	21 mm
Length	58.8 mm
Static load	12.9 kN
Width	54 mm
