

BASLER POWER SUPPLIES FOR CAMERAS AND ACCESSORIES

2200000325

Power Supply for Camera 18.0W, M8 6-pin

- Power supplies for Cameras
- Power over Ethernet Rack
- Power over Ethernet Slot

PRODUCT DESCRIPTION

Basler Power Supplies for Cameras and Accessories are engineered to deliver stable and reliable power tailored to the specific requirements of Basler's high-performance industrial cameras. These power supplies typically provide 12V or 24V DC output with power ratings ranging from 18W to 60W, making them suitable for a variety of camera models, including the Basler ace, dart, and boost series. They feature standardised connectors such as barrel plugs or Hirose connectors, ensuring compatibility and ease of integration. Built-in protections like overvoltage, overcurrent, and short-circuit safeguards enhance system reliability, especially in mission-critical applications.

In practical terms, these power supplies are ideal for deployment in factory automation, quality inspection, medical imaging, and traffic monitoring systems where continuous camera operation is essential. Their compact design allows for seamless integration into control cabinets or machine housings, and they are often certified for industrial standards such as CE, UL, and FCC. By ensuring consistent voltage delivery and minimising electrical noise, Basler power supplies contribute to the overall accuracy and longevity of the imaging systems, enabling precise data capture and improved system uptime in demanding environments.
