

## MIDWEST OPTICAL ND030/NI030 FILTER NEUTRAL DENSITY

F/ND030-C

Filter - Neutral density 30nm, for C-Mount

- Neutral density, OD = 0.3 T = 50%
- Work area from 400-700 nm
- Reduces light intensity

### PRODUCT DESCRIPTION

Neutral density filters are used to reduce the amount of light that reaches the sensor. This allows for longer exposure times despite high aperture value.

ND = standard density filter, NI = Near-IR low density density filter

### TECHNICAL DATA

Filter thread (thread diameter x pitch)	C-Mount
