

MIDWEST OPTICAL ND090/NI090 FILTER NEUTRAL DENSITY

F/ND090-C

Filter - Neutral density 90nm, for C-Mount

- Neutral density, OD = 0.9 T = 12.5%
- Work area from 400-700 nm
- Reduces light intensity

PRODUCT DESCRIPTION

Neutral density filters are used to reduce the amount of light that reaches the sensor. This allows for longer exposure times despite high aperture value.

ND = standard density filter, NI = Near-IR low density density filter

TECHNICAL DATA

Filter thread (thread diameter x pitch)

C-Mount
