

M8 CONNECTION CABLES

7000-08001-6100030
M8 male 0° A-cod. with cable PVC 3x0.25 bk UL/CSA
0.3m

- 3 and 4 pole connectors
- PUR or PVC
- Straight or 90°
- Various lengths available

PRODUCT DESCRIPTION

M8 connection cables are a key component in industrial automation, control systems, and sensor technology. These cables are widely used for connecting devices such as sensors, actuators, and controllers in harsh and demanding environments. With their compact size and reliable performance, M8 connection cables offer a secure and efficient way to transmit power and data in various applications, including manufacturing, robotics, automotive, and process control. Their robust design ensures durability, resistance to vibrations, and protection from environmental factors such as moisture, dust, and chemicals, making them ideal for use in industrial settings. Whether for simple signal transmission or more complex power and data requirements, M8 cables provide a versatile and dependable solution for modern industrial systems.
