ASO SENTIR SAFETY MAT ACCESSORIES

603 020
Corner connector for RS 14 ramp rail

- Ramp Rail
- Fixing Rail
- Corner for Ramp Rail

PRODUCT DESCRIPTION

The ramp accessories for the SENTIR safety mat from ASO Safety Solutions provide secure and practical installation options that ensure both safety compliance and ease of access in industrial environments. The system includes the RS 14 ramp rail, the BS 14 fixing rail, and RS 14 corner connectors. The ramp rails create a smooth bevelled edge around the safety mat, preventing tripping hazards and allowing easy passage for operators, carts, or automated guided vehicles (AGVs), while also protecting the mat edges from mechanical stress. The fixing rail BS 14 provides a reliable anchoring method to keep the mat securely in place even under heavy traffic or vibration. Corner connectors ensure that ramped installations remain stable and continuous, even around 90° turns, making them suitable for modular floor safety layouts. These accessories are essential for integrating safety mats into production floors, robotic cells, and access points where safe operator entry and ergonomics must be balanced with durability and compliance to international safety standards.
