AGROFLEX PET BRAIDED SLEEVINGS POLYESTER

6875.40.24
AGROflex PET Braided cable sleeving, 24-38mmø, black

PRODUCT DESCRIPTION

In cooperation with renowned customers, Agro have defined the product properties which are most important for the user and have work together with production technicians to translate these criteria into improved products.

The most notable change is the more pointed braid angle in which the individual threads are interwoven. This new way of braiding combined with a slightly thinner monofilament in the polyester version results in an extremely flexible tube and outstanding tube fitting qualities. The meshwork can be fitted onto areas twice as large as its normal width.

The more pointed braid angle permits smoother insertion of cords and cables even across long distances. The individual filaments run virtually parallel to the cables and do not get in their way as an obstruction.
