# DC SWITCHING MODULE

**DCM 010** 

01010.0-00 DCM 010 switch module, DC 15 A

- For high DC loads
- Suitable for many applications
- Wide DC voltage range
- Easy connection

### PRODUCT DESCRIPTION

This electronic switching relay is used to switch high DC loads in cabinets with the help of a power MOSFET. These loads are commonly panel heaters & coolers.

The relay is controlled via an external volt free contact from a thermostat or hygrostat, which is connected to terminals 3 and 4, the load is then connected to terminals 1 and 2, with the power connections are 5 and 6.

NOTE! It must be ensured that the external connector is suitable for changing the signal current (see technical data in the datasheet).
