ORLACO SIDEEYE KIT

Blind spots on trucks

ORL0403130
SideEye Kit including monitor, Camera, Radar and interface box

- Famos 118° camera
- With or without 7" RLED monitor
- SRD Radar sensor
- Interfacebox and cabling
- Speakers with acoustic warning

PRODUCT DESCRIPTION

Active assistance to detect and prevent accidents when maneuvering where you are not alone on the road.

Every year, large numbers of people are injured and killed because they are not detected in the blind spot, pedestrians, cyclists and other traffic staying in urban environments are difficult to detect and can appear when you least expect it.

With Orlaco's SideEye, not only do you get a visual warning, the short-range radar also picks up and gives you a warning signal through the loudspeaker when something appears next to your vehicle. In addition, there are markings in the monitor tower that clearly show if the person or other vehicle is in your risk zone.

Research has shown that most accidents occur on the right side of the vehicle, therefore this product has been developed. The radar unit has been designed to respond in less than 300ms, allowing the driver to act and prevent the accident.

Kit can include:

- Famos Camera: 118° lens angle, shock-proof and vibration resistant
- RLED/LEDD SRD monitor: 7" TFT, auto brightness control
- Short range radar unit: 3m x 12m detection zone
- SRD interface box with external speaker: Connectos SRD sensors to the camera, monitor and external speaker
- 4-pin UNI cable ad short range radar cable: connects camera and monitor
- Outdoor Speaker: Powerful 97dB speaker

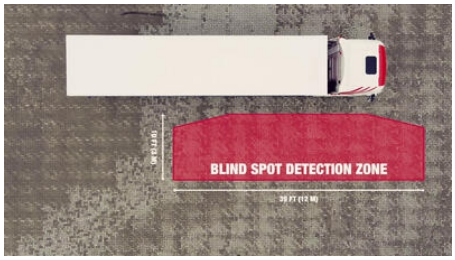

Contact us to discuss your application and we can advise on what kit you need.
