

MIDWEST OPTICAL ND120/NI120 FILTER NEUTRAL DENSITY

F/ND120-C

Filter - Neutral density 120nm, for C

- Neutral density, OD = 1.2 T = 6.255%
- Work area from 400-700 nm
- Reduces light intensity

PRODUCT DESCRIPTION

Neutral density filters are used to reduce the amount of light that reaches the sensor. This allows for longer exposure times despite high aperture value.

ND = standard density filter, NI = Near-IR low density density filter
