POWER SUPPLY 1-PHASE, 24 V DC DIMENSION Q SERIES

QS10.241-A1 PSU 100-240V ac I/P 24V dc 10A 240W O/P ATEX

- Power supply unit for DIN rail. 100-240 V ac/110 V dc
- 60/82 mm wide
- Up to 93.9% efficiency
- 50% bonus power
- Maximum performance

PRODUCT DESCRIPTION

Puls Dimension Q is a new generation of power supply unit with very small construction dimensions and many technical benefits. The power supply unit has low inrush current (even with warm starts), active PFC, which provides a power factor close to one, expanded temperature range and active protection against line transients. (Not QS20) The power supply unit has high efficiency, which provides long lifetime both for the unit and adjacent products. Temperature increases in the cabinet are also kept at a low level. Furthermore, there is a relay output (DC OK) that is deactivated when the output voltage deviates more than 10 % from the set value. The bonus power provides an extra 50 % reserve with retained 24 V, which is an advantage when connected loads have high starting currents. The power supply unit has a high short-circuit current that simplifies tripping of secondary fuses. Both the bonus power and short-circuit current are time-limited to 4 seconds to avoid constant overloading of the power supply unit and wiring. QS20.241 If a short circuit lasts longer than 4 seconds, the power supply unit will continue in so-called hick-up mode. The output power is reduced to nearly zero for about 17 seconds. The power supply unit then makes a new start-up attempt for 2-4 seconds. If the short circuit remains, a new pause of 17 seconds is taken. Once the short circuit is remedied, the power supply unit automatically returns to service. For more technical information, consult the general information at the beginning of the power supply section.

Bonus power

То

The power supply unit has bonus power that enables high power extraction with retained 24 V DC for 4 seconds, which is a major advantage when connected loads have high starting currents, such as the case with motors. How often bonus power can be utilised depends on the application. With the following diagram and formula, the repeat time can be calculated for each application. The bonus power is available as soon as the power supply unit is started and directly after a short circuit.

Bonus power	Operating cycle
P _{OLIT} P _{PEAK} T _{PEAK} T _O	100 % 90 % 80 % P ₀ =50 % P ₀ =75 % 60 % 40 % 30 % 20 % 10 % P ₀ =100% PPEAK 10 % 100 110 120 130 140 150 %
Po	Nominal load current
Ppeak	Peak current

Time between bonus power

Tpeak	Peak current I time
Operating cycle	Tpeak / (Tpeak + To)
То	Tpeak - (operating cycle * Tpeak) / operating cycle

Example: Nominal load current (Po) is 7.5 A. Peak current (Ppeak) is 12 A

20 % of I_{nom} . The peak time is 3 seconds. 7.5 A = 75 % of I_{nom} . According to the diagram, the operating cycle is about 50 %. To = 3- (0.5 * 3) / 0.5 = 3 Maximum repeat time of the power boost is 3 seconds

Output characteristics

TECHNICAL DATA

INPUT DATA

Input voltage ac	100-240 V
Input voltage ac min	85 V AC
Input voltage ac max	276 V AC
Input voltage dc	110-150 V
Input voltage dc min	88 V DC
Input voltage dc max	187 V DC
Inrush current at 120 V ac typical	4 A
Inrush current at 230 V ac typical	7 A
Input voltage range	Wide-range
Power factor at 120 V ac, full load. Typical	0.98
Power factor at 230 V ac, full load. Typical	0.92
Number of phases	1

OUTPUT DATA

Output voltage	24 V DC
Output voltage min	24 V DC
