

POWER SUPPLY

3AC 24V 500W

- IP65/67 Protection Grade
- 1000W_{peak} 5s
- 3AC 380-480V Wide-range input
- 95.6% Full Load and Excellent Partial Load Efficiencies
- DIN Rail mounting possible, option "D"
- Output connected to PE
- Version without connection to PE on request
- Large Output Capacitors
- Not potted
- Negligible Low Input Inrush Current Surge
- Full Power between -25°C and +55°C
- DC-OK Relay Contact
- 3 Years Warranty

GENERAL DESCRIPTION

The FPT500 is an industrial grade power supply for the 3-phase mains system incorporated in a rugged wall-mount housing with an ingress protection level of IP65/67.

The most outstanding features of the FPT series are the compact size, the wide operational temperature range, the negligible low input inrush current and the extremely high efficiencies, which are achieved by various technological design technologies. Large sized output capacitors can absorb and store regenerative energy from breaking motors.

Various connector options support the different needs of individual applications. Please contact PULS for possible options. High immunity to transients and power surges as well as low electromagnetic emission and an international approval package makes usage in nearly every environment possible.

SHORT-FORM DATA

Output voltage	DC 24V	Nominal
Adjustment range	24-28V	Factory setting 24.5V
Output power	Continuous: 600 / 500 / 350W Short-term, up to 5s: 1000 / 700W	Up to: +45 / +55 / +70°C +55 / +70°C
Input voltage AC	3AC 380-480V	±15%
Power factor	0.94 / 0.95	At 3x400 / 480Vac
AC Inrush current	1.9 / 1.8A _{peak}	At 3x400 / 480Vac, temperature indepen.
Efficiency	95.8 / 95.6%	At 3x400 / 480Vac
Losses	22 / 23W	At 3x400 / 480Vac
Hold-up time	24 / 24ms	At 3x400 / 480Vac
Temperature range	-25°C to +70°C Derate linearly from +45°C to +70°C	
Size (w x h x d)	182x183x59mm	Without connectors
Weight	1200g / 2.7lb

The information given in this document is correct to the best of our knowledge and experience at the time of publication. If not expressly agreed otherwise, this information does not represent a warranty in the legal sense of the word. As the state of our knowledge and experience is constantly changing, the information in this data sheet is subject to revision. We therefore kindly ask you to always use the latest issue of this document (available under www.pulspower.com).

No part of this document may be reproduced or utilized in any form without our prior permission in writing.

Packaging and packaging aids can and should always be recycled. The product itself may not be disposed of as domestic refuse.

TERMINOLOGY AND ABBREVIATIONS

PE and  Symbol	PE is the abbreviation for Protective Earth and has the same meaning as the symbol  .
Earth, Ground	This document uses the term "earth" which is the same as the U.S. term "ground".
T.b.d.	To be defined, value or description will follow later.
3AC 400V	A figure displayed with the AC or DC before the value represents a nominal voltage with standard tolerances (usually $\pm 15\%$) included. E.g.: DC 12V describes a 12V battery disregarding whether it is full (13.7V) or flat (10V)
3x 400Vac	A figure with the unit (Vac) at the end is a momentary figure without any additional tolerances included.
50Hz vs. 60Hz	As long as not otherwise stated, 3AC 400V parameters are valid at 50Hz mains frequency.
may	A key word indicating flexibility of choice with no implied preference.
shall	A key word indicating a mandatory requirement.
should	A key word indicating flexibility of choice with a strongly preferred implementation.

1. Intended Use

This device is designed for indoor use and is intended for commercial applications, such as in industrial control, process control, monitoring and measurement equipment or the like.

Do not use this device in equipment where malfunction may cause severe personal injury or threaten human life. If this device is used in a manner outside of its specification, the protection provided by the device may be impaired.

2. Installation Instructions

⚠ DANGER Risk of electrical shock, fire, personal injury or death.

- Turn power off before working on the device. Protect against inadvertent re-powering.
- Do not open, modify or repair the device.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on and immediately after power-off. Hot surfaces may cause burns.
- Install the device on a large enough flat surface. Sharp edges on the back may cause injury.
- If damages or malfunctioning occur during installation or operation, immediately turn power off and send unit to the factory for inspection.
- The device is designed as "Class of Protection I" equipment according to IEC 61140. Do not use without a proper PE (Protective Earth) connection.

⚠ WARNING Risk of damages on the device

- Keep the following minimum installation clearances: 50mm on top, 50mm on the bottom, 10mm on the front and 10mm on the left and right side.
- The maximum surrounding air temperature is +70°C (+158°F). The operational temperature is the same as the ambient or surrounding air temperature and is defined 2cm below the device.
- The device is designed to operate in areas between 5% and 95% relative humidity. Cleaning only with a damp cloth.

Obey the following installation instructions:

This device may only be installed and put into operation by qualified personnel. This device does not contain serviceable parts. The tripping of an internal fuse is caused by an internal defect. Install the device onto a flat surface with the terminals on the bottom of the device. Other mounting orientations require a reduction in output current.

For wall mounting use 4 screws. Two on top and 2 on bottom mounting holes. Recommended screw size is M4. The enclosure of the device provides a degree of protection of IP65/67 when installed with all mating connectors firmly connected. The device is designed for pollution degree 3 areas in controlled environments.

The negative potential of the outputs is permanently connected to PE within the unit. Do not connect the negative potential of the output to PE outside the unit.

For TN, TT mains systems with earthed neutral and IT star mains systems with insulation monitoring the device is designed for overvoltage category III zones up to 2000m (6560ft) and for overvoltage category II zones up to 5000m (16400ft). The device is designed to be safe in case of a single phase loss and does not require an external protection. Functionality is limited see chapter 23.3.

The device is designed for altitudes up to 5000m (16400ft). Above 2000m (6560ft) a reduction in output current and the operation is limited according mains systems description above. The device is designed, tested and approved for branch circuits up to 20A (UL) and 32A (IEC) without additional protection device. If an external fuse is utilized, do not use circuit breakers smaller than 6A B- or C-characteristic to avoid a nuisance tripping of the circuit breaker. A disconnecting means shall be provided for the input of the device. This must be suitably located and easily reachable. The disconnecting means must be marked as such for the device.

3. AC-Input

The device is suitable to be supplied from TN, TT or IT mains networks. For more details, please review chapter 2.

AC input rated	nom. 3AC 380-480V	
AC input range	3x 323-552Vac	
Input frequency	nom. 50-60Hz	±6%
Turn-on voltage	typ. 320Vac	Steady-state value, see Fig. 3-1
Shut-down voltage	typ. 300Vac	Steady-state value, see Fig. 3-1
Loss of one phase	will continue to operate without interruption if loaded below limits in figure see Fig. 23-1	
External input protection	See recommendations in chapter 2 .	

The device is designed, tested and approved for branch circuits up to 20A (UL) and 32A (IEC) without additional protection device. If an external fuse is utilized, do not use circuit breakers smaller than 6A B- or C-characteristic to avoid a nuisance tripping of the circuit breaker.

	3AC 400V	3AC 480V	
Input current	typ. 1.1A	0.9A	At 500W, symmetrical phase voltages, see Fig. 3-3
Power factor	typ. 0.94	0.95	At 500W, see Fig. 3-4
Start-up delay	typ. 1s	1s	At 500W symmetrical phase voltages, see Fig. 3-2
Rise time	typ. 10ms	10ms	At 500W constant current load, 0mF load, see Fig. 3-2
	typ. 12ms	12ms	At 500W constant current load, 12.5mF, see Fig. 3-2
Turn-on overshoot	max. 500mV	500mV	See Fig. 3-2

Fig. 3-1: Input voltage range

Fig. 3-2: Turn-on behavior, definitions

Fig. 3-3: Input current vs. output current at 24V output voltage

Fig. 3-4: Power factor vs. output current at 24V output voltage

4. DC-Input

Do not operate this power supply with DC-input voltage.

5. Input Inrush Current

The power supply is equipped with an active inrush current limitation circuit, which limits the input inrush current after turn-on to a negligible low value. The input current is usually smaller than the steady state input current.

		3AC 400V	3AC 480V	
Inrush current*)	max.	2.1A _{peak}	2A _{peak}	Temperature independent
	typ.	1.9A _{peak}	1.8A _{peak}	Temperature independent

*) The charging current into EMI suppression capacitors is disregarded in the first microseconds after switch-on.

Fig. 5-1: Typical turn-on behavior at nominal load and 25°C ambient temperature

6. Output

The outputs provide a (PELV/ES1) rated voltage, which is galvanically isolated from the input voltage. The negative potential of the output is permanently connected to PE within the unit.

The device is designed to supply any kind of loads, including capacitive and inductive loads. If capacitors with a capacitance >100mF are connected to the output, this the unit might charge the capacitor in hiccup mode.

Output voltage	nom.	24V	Factory setting 24.5V
Adjustment range		24-28V	Adjustable in steps: 24V, 24.5V, 25V, 25.5V, 26V, 26.5V, 27V and 28V
Factory settings	typ.	24.5V	±0.2%, at nominal load
Line regulation	max.	10mV	Between 3x 323 and 552Vac input voltage change
Load regulation	typ.	100mV	Between 0 and 600W output load, static value
Ripple and noise voltage	max.	100mVpp	Bandwidth 20Hz to 20MHz, 50Ohm
Total output power	nom.	600W	Up to +45°C at ambient temperatures, see Fig. 6-1
	nom.	500W	Up to +55°C at ambient temperatures
	nom.	350W	Up to +70°C at ambient temperatures
short term up to 5s	nom.	1000W	Up to +55°C at ambient temperatures, see Fig. 6-1
	nom.	700W	Up to +70°C at ambient temperatures
		Derate linearly between +45 °C to +70°C	
Overload/ short-circuit current	typ.	42A / 0A	At heavy overloads (when output voltage falls below 13V), the power supply delivers continuous output current for 2s. After this, the output is switched off for approx. 18s before a new start attempt is automatically performed. This cycle is repeated as long as the overload exists. If the overload has been cleared, the device will operate normally, see Fig. 6-2. Load impedance 10mOhm. Discharge current of output capacitors is not included.
Output capacitance	typ.	12 500µF	Included inside the power supply,
Parallel Use			Do not parallel units for higher output currents
Back-feeding loads	max.	35V / 4J	The unit is resistant and does not show malfunctioning when a load feeds back voltage to the power supply. It does not matter whether the power supply is on or off. The absorbing energy can be calculated according to the built-in large sized output capacitor.

- ¹⁾ At heavy overloads (when output voltage falls below 13V), the power supply delivers continuous output current for 2s. After this, the output is switched off for approx. 18s before a new start attempt is automatically performed. This cycle is repeated as long as the overload exists. If the overload has been cleared, the device will operate normally. see Fig. 6-2.

Fig. 6-1: Output voltage vs. output current, for continuous load, typ.

Fig. 6-2: Short-circuit on output, Hiccup^{PLUS} mode, typ.

7. Hold-up Time

The hold-up time is the time during which a power supply's output voltage remains within specification following the loss of input power. The hold-up time is output load dependent. At no load, the hold-up time can be up to several seconds. The status LED is also on during this time.

		3AC 400V	3AC 480V	
Hold-up Time	typ.	56ms	56ms	At 250W output load, see Fig. 7-1
	min.	47ms	47ms	At 250W output load, see Fig. 7-1
	typ.	24ms	24ms	At 500W output load, see Fig. 7-1
	min.	20ms	20ms	At 500W output load, see Fig. 7-1

Fig. 7-1: Hold-up time vs. input voltage

Fig. 7-2: Shut-down behavior, definitions

8. DC-OK Relay Contact

This feature monitors the output voltage, which is produced by the power supply itself. It is independent of an eventually present external voltage on the output of the power supply.

Contact closes	As soon as the output voltage reaches typ. 22Vdc. The DC-OK Relay Contact is synchronized with the Status Led.
Contact opens	As soon as the output voltage dips below 22Vdc. Short dips will be extended to a signal length of 100ms. Dips shorter than 1ms will be ignored.
Switching hysteresis	1V
Contact ratings	Maximal 60Vdc 0.3A, 30Vdc 1A, 30Vac 0.5A, resistive load Minimal permissible load: 1mA at 5Vdc
Isolation voltage	See dielectric strength table in chapter 18.

Fig. 8-1: DC-OK relay contact behavior

9. Efficiency And Power Losses

		3AC 400V	3AC 480V	
Efficiency	typ.	95.8%	95.6%	At 24V, 600W
Average efficiency	typ.	94.2%	94%	25% at 120W, 25% at 250W, 25% at 370W, 25% at 500W
Power losses	typ.	2.5W	2.5W	At 24V, 0W (no load)
	typ.	12W	13W	At 24V, 250W (half load)
	typ.	22W	23W	At 24V, 500W (full load)

* The average efficiency is an assumption for a typical application where the power supply is loaded with 25% of the nominal load for 25% of the time, 50% of the nominal load for another 25% of the time, 75% of the nominal load for another 25% of the time and with 100% of the nominal load for the rest of the time.

Fig. 9-1: Efficiency vs. output current at 24V, typ.

Fig. 9-2: Losses vs. output current at 24V, typ.

Fig. 9-3: Efficiency vs. input voltage at 24V, 500W, typ.

Fig. 9-4: Losses vs. input voltage at 24V, 500W, typ.

10. Lifetime Expectancy

The Lifetime expectancy shown in the table indicates the minimum operating hours (service life) and is determined by the lifetime expectancy of the built-in electrolytic capacitors. Lifetime expectancy is specified in operational hours and is calculated according to the capacitor's manufacturer specification.

The manufacturer of the electrolytic capacitors only guarantees a maximum life of up to 15 years (131 400h). Any number exceeding this value is a calculated theoretical lifetime which can be used to compare devices.

	3AC 400V	3AC 480V	
Calculated lifetime expectancy	78 000h	74 000h	At 24V, 500W and 40°C
	218 000h	185 000h	At 24V, 250W and 40°C
	139 000h	133 000h	At 24V, 500W and 25°C
	615 000h	525 000h	At 24V, 250W and 25°C

11. MTBF

MTBF stands for **Mean Time Between Failure**, which is calculated according to statistical device failures, and indicates reliability of a device. It is the statistical representation of the likelihood of a unit to fail and does not necessarily represent the life of a product.

The MTBF figure is a statistical representation of the likelihood of a device to fail. A MTBF figure of e.g. 1 000 000h means that statistically one unit will fail every 100 hours if 10 000 units are installed in the field. However, it can not be determined if the failed unit has been running for 50 000h or only for 100h.

For these types of units the MTTF (**Mean Time To Failure**) value is the same value as the MTBF value.

	3AC 400V	3AC 480V	
MTBF SN 29500, IEC 61709	315 000h	290 000h	At 24V, 500W and 40°C
	580 000h	537 000h	At 24V, 500W and 25°C
MTBF MIL HDBK 217F	127 000h	120 000h	At 24V, 500W and 40°C; Ground Benign GB40
	193 000h	184 000h	At 24V, 500W and 25°C; Ground Benign GB25
	33 000h	35 000h	At 24V, 500W and 40°C; Ground Fixed GF40
	47 000h	45 000h	At 24V, 500W and 25°C; Ground Fixed GF25

14. User Interface

- A. Input Connector
- B. Output Connector
- C. DC-OK Signal Connector
- D. Status LED
- E. LED Bar
- F. Set Mode and Up and Down Button

LED Bar Signalization Overview

The user menu consists of the LED bar display and 3 push buttons. Two menus are available – the monitoring menu and the configurations menu. Variants with a single output feature only a menu for the Total Power Monitor and the Output Voltage Configuration.

After the start-up of the PSU, the menu is in the output power monitoring mode by default.

Output Power Monitoring

The LED bar shows the actual output power in percentage of 500W. So if the device provides 200W the LEDs light up green including the 40% LED. The LEDs light up orange if the delivered power exceeds 500W.

By default, the PSU displays the total output power after startup.

Status LED

The Status LED is used to signalize special conditions.

-  **STATUS LED lights up green continuously**
DC voltage is above 22V and all outputs run according to their settings.
-  **STATUS LED is off continuously**
DC voltage is not OK or power supply is not powered.
-  **STATUS LED lights up red continuously**
AC input dropout
-  **STATUS LED flashes orange with 1Hz**
Hiccup^{Plus} is OFF during the 18s Hiccup off state.
-  **STATUS LED flashes red with 1Hz**
The unit has turned off due to overtemperature and the output is switched off. As soon as the temperature goes down to a safe level the output switches on again.

See actual output voltage

To see the actual output voltage press the "Set Mode" button for 3s. All LEDs will be flashing for 1s and the LED indicating the output voltage will remain on. Wait for 20s and the LED bar will return to output power monitoring mode.

Setting Functions

Change output voltage

- Press SET / MODE for 3s. All LEDs light up for ones.
- The LED display is now in Voltage Set Mode. A green LED signals the currently set voltage: e.g. the LED next to 20% represents a value of 24.5V.
- All orange LEDs are off in this mode.
- Voltage steps are labelled on the right hand side of the LED bar.
- Push the UP button to increase the set point by one step.
- Push the DOWN button to decrease the set point by one step.
- New set point is applied immediately.
- Exit the configuration menu by waiting for 20s without pressing any button – PSU will switch to output power monitoring mode automatically.

Lock Buttons

- In any monitoring menu, press UP and DOWN buttons simultaneously for 3s.
 - ▶ All LEDs start flashing for 5s to indicate that button lock status has changed.
- After that, the display returns to output power monitoring mode.
- If SET / MODE button is pushed for 3s and the button lock is activated, all LEDs starts flickering for 5s to indicate that buttons are locked
- Deactivate the button lock feature, by pressing the UP and DOWN buttons simultaneously for 3s in any monitoring menu again.
 - ▶ All LEDs start flashing for 5s to indicate that button lock status has changed.

15. EMC

The EMC behavior of the device is designed for applications in industrial environment as well as in residential, commercial and light industry environments.

The device is investigated according to EN 61000-6-1, EN 61000-6-2, EN 61000-6-3, EN 61000-6-4, EN 61000-3-2 and EN 61000-3-3.

EMC immunity

Electrostatic discharge	EN 61000-4-2	Contact discharge	8kV	Criterion A
Air discharge		Air discharge	15kV	Criterion A
Electromagnetic RF field	EN 61000-4-3	80MHz - 2.7GHz	20V/m	Criterion A
		2.7GHz - 6GHz	10V/m	Criterion A
Magnetic field	EN 61000-4-8	50Hz/60Hz	30A/m	Criterion A
Fast transients (Burst)	EN 61000-4-4	AC Input lines	4kV	Criterion A
		DC Output lines	4kV	Criterion A
		DC OK Output	4kV	Criterion A
Surge voltage on AC input	EN 61000-4-5	Lx to Ly	2kV	Criterion A
		L to -PE	4kV	Criterion A
Surge voltage on DC output	EN 61000-4-5	+ to -	1kV	Criterion A
		+/- to PE	1kV	Criterion A
Surge voltage on Output OK	EN 61000-4-5	DC-OK to PE	1kV	Criterion A
Conducted immunity	EN 61000-4-6	0.15 - 80MHz	20V	Criterion A
Voltage dips	EN 61000-4-11	0V	1 cycle	Criterion A
		40% of V_{nom}	200ms	Criterion A
		70% of V_{nom}	500ms	Criterion A
Voltage interruptions	EN 61000-4-11	0V	5000ms	Criterion C
Powerful transients	VDE 0160	Over entire load range	1550V, 1.3ms	Criterion A

Performance criterions:

A: The device shows normal operation behavior within the defined limits.

C: Temporary loss of function is possible. The device may shut-down and restarts by itself. No damage or hazards for the device will occur.

EMC Emission

Conducted emission AC input lines	EN 55032, FCC Part 15 Class B		
Conducted emission DC output lines			
Conducted emission DC OK Output			
Radiated emission	EN 55032 / EN 55011	Class B	
	FCC Part 15		
Harmonics	EN 61000-3-2	Pass for Class A equipment	
Voltage fluctuations, flicker	EN 61000-3-3	Pass tested with constant current loads, non pulsing	

This device complies with FCC Part 15 rules.

Operation is subjected to following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Switching Frequencies

PFC converter	20-135kHz	Input voltage and output load dependent
Main converter	60-140kHz	Output load dependent
Auxiliary converter	54-66kHz	Output load dependent
Microcontroller clocks	48Mhz and 32MHz	Fixed frequency

16. Environment

Operational temperature	-25°C to +70°C (-13°F to 158°F)	Operational temperature is the same as the ambient or surrounding temperature and is defined as the air temperature 2cm below the unit.
Storage temperature	-40°C to +85°C (-40°F to 185°F)	For storage and transportation
Output de-rating	10W/°C 33W/1000m or 5°C/1000m	Between +45°C and +70°C (113°F to 140°F) For altitudes >2000m (6560ft), see Fig. 16-2: Output power vs. ambient temp.
	The de-rating is not hardware controlled. The user has to take this into consideration to stay below the de-rated current limits in order not to overload the unit.	
Humidity	5 to 95% r.h.	According to IEC 60068-2-30
Atmospheric pressure	54-110kPa	see Fig. 16-2 for details
Altitude	Up to 5000m (16 400ft)	see Fig. 16-2 for details
Over-voltage category	III	According to IEC 60664-1 For TN, TT mains systems with earthed neutral and IT star mains systems with insulation monitoring for altitudes up to 2000m
	II	According to IEC 60664-1 For TN, TT mains systems with earthed neutral and IT star mains systems with insulation monitoring for altitudes between 2000m and 5000m
		According to IEC 60664-1 For TN, TT, IT Delta mains systems or IT star mains systems without insulation monitoring for altitudes up to 2000m
Degree of pollution	3	According to IEC 62477-1, not conductive
Vibration sinusoidal	2-17.8Hz: ±1.6mm; 17.8-500Hz: 2g 2 hours / axis	According to IEC 60068-2-6
Shock	30g 6ms, 20g 11ms 3 bumps / direction, 18 bumps in total	According to IEC 60068-2-27
	Shock and vibration is tested in combination with DIN-Rails according to EN 60715 with a height of 15mm and a thickness of 1.3mm and standard orientation.	
LABS compatibility	Yes	
Audible noise	Some audible noise may be emitted from the power supply during no load, overload or short circuit.	

Fig. 16-1: Output power vs. ambient temp.

Fig. 16-2: Output power vs. ambient temp.

17. Safety And Protection Features

Isolation resistance	min.	500MOhm	At delivered condition between input and output, measured with 500Vdc
	min.	500MOhm	At delivered condition between input and PE, measured with 500Vdc
	min.	500MOhm	At delivered condition between output and Output OK contacts, measured with 500Vdc
PE resistance	max.	0.1Ohm	Resistance between PE terminal and the housing
Input/Output separation		PELV	IEC/EN/UL 61010-2-201, IEC/EN 62368-1, IEC/EN 60950-1
Output over-voltage protection	typ.	31.8Vdc	
	max.	32.5Vdc	In case of an internal defect, a redundant circuit limits the maximum output voltage. The output shuts down and automatically attempts to restart
Class of protection		I	According to IEC 61140 A PE (Protective Earth) connection is required
Ingress protection		IP65/67	According to EN/IEC 60529
Over-temperature protection		Included	Output shut-down with automatic restart. Temperature sensors are installed on critical components inside the unit and turn the unit off in safety critical situations, which can happen e.g. when ambient temperature is too high, ventilation is obstructed or the de-rating requirements are not followed. There is no correlation between the operating temperature and turn-off temperature since this is dependent on input voltage, load and installation methods.
Input transient protection		MOV (Metal Oxide Varistor)	For protection values, see chapter 15, EMC.
Internal input fuse		Included	Not user replaceable slow-blow high-breaking capacity fuse
Touch current (leakage current)	max.	0.45 / 1.5 mA	At 3x 480Vac, 60Hz, TN-,TT-mains / IT-mains Lower currents at lower voltages and frequencies.

18. Dielectric Strength

The negative potential of the outputs is permanently connected to PE within the unit. The output is insulated from the input by a double or reinforced insulation.

Type and routine tests are conducted by the manufacturer. Field tests may be conducted in the field using the appropriate test equipment which applies the voltage with a slow ramp (2s up and 2s down). Connect all input-terminals before conducting the test. When testing, set the cut-off current settings to the value in the table below.

		A	B
Type test	60s	2830Vac	500Vac
Routine test	5s	2550Vac	500Vac
Field test	5s	2000Vac	500Vac
Cut-off current setting for field test		>10mA	>10mA

Fig. 18-1: Dielectric strength

19. Approvals And Fulfilled Standards

IEC 62368-1	IECEE CB SCHEME	CB Scheme Certificate IEC 62368-1 - Audio/video, information and communication technology equipment - Safety requirements Output safety level: ES1
IEC 61010-2-201	IECEE CB SCHEME	CB Scheme Certificate IEC 61010-2-201 - Electrical Equipment for Measurement, Control and Laboratory Use - Particular requirements for control equipment
IEC 60950-1		Manufacturers Declaration IEC 60950-1 - General safety requirements for Information Technology Equipment (ITE)
UL 61010		UL Certificate Listed equipment for category NMTR - UL 61010-2-201 - Electrical equipment for measurement, control and laboratory use - Particular requirements for control equipment Applicable for US and Canada E-File: E198865
Semi F47	SEMI F47	Test Report Voltage Sag Immunity for Semiconductor Processing Equipment

20. Regulatory Compliance

EU Declaration of Conformity		Trade conformity assessment for Europe The CE mark indicates conformance with the European – EMC directive – Low-voltage directive (LVD) – RoHS directive
WEEE Directive		Manufacturer's Statement EU-Regulation on Waste Electrical and Electronic Equipment Registered in Germany as business to business (B2B) products.
REACH Directive	REACH ✓	Manufacturer's Statement EU-Regulation regarding the Registration, Evaluation, Authorisation and Restriction of Chemicals
RoHS-China		Manufacturer's Statement Administrative Measures for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products 25 years
IEC/EN 61558-2-16 (Annex BB)	Safety Isolating Transformer	Safety Isolating Transformers corresponding to Part 2-6 of the IEC/EN 61558

21. Accessories

21.1. DIN RAIL MOUNTING KIT: ZM.FP-DIN2

In addition to screw mounting FIEPOS has the option to be simply attached to a DIN rail.

- DIN-Rail not included
- DIN-Fixture pre-assembled

21.2. CONNECTORS

FIEPOS features a large number of different connectors. PULS provides all matching connectors from its own stock in order to be able to supply customers quickly in the design-in phase.

For a higher number of pieces or other options use www.harting.com.

Connector Name	Order number	Connector Description
Harting HANQ4/2	ZCF.hanq42	Q4/2 Set AS female 2.5-6mm ² 7-13mm
Harting HANQ4/2	ZCF.hanq42-1	Q4/2 Set AS female 2.5-6mm ² 14-17mm
Harting HANQ2/0	ZCM.hanq20	Q2/0 Set screw male 2.5-6mm ² 6-12mm
Harting HANQ4/0	ZCM.hanq40	Q4/0 Set 1m cable 2,5mm ² IP67
Harting HANQ5/0	ZCF.hanq50	Q5/0 Set QuickLock female 0.5-2.5mm ² 6-12mm
Harting M12-A	ZCF.m12a5p	M12-A 5pin cut clamp female 0.34-0.5mm ² / 6-8mm
Harting M12-A	ZCM.m12a5p	M12-A 5pin cut clamp female 0.34-0.5mm ² / 6-8mm
Harting M12-S	ZCF.m12s4p	M12-S 4pin screw female 2.5mm ² / 6-8mm
Harting M12-L	ZCM.m12l5p	M12-L 5pin cut clamp male 0.75-1.5mm ² / 5.8-13.5mm
Harting M12-T	ZCM.m12t4p	M12-T 4pin screw male 1.5mm ² / 8-10mm
Harting 7/8"	ZCM.78inch4p	7/8" 4pin screw male 1.5mm ² / 6-8mm
Harting 7/8"	ZCF.78inch3p	7/8" 3pin screw female 1.5mm ² / 6-8mm
Harting 7/8"	ZCF.78inch5p	7/8" 5pin screw female 0.75-1.5mm ² / 6.8-12.5mm

22. Related Products

The FIEPOS product family includes various devices with different technical parameters and features. The following pages provides a general overview of the available solutions. Please also get in touch with your PULS contact person, for more detailed application advice and technical information.

FPT500.245-006-107:

Power Supply with one **current-limited high-power channel** (20A) and second **fused low-power channel** (2–12A)

SHORT-FORM DATA

Output voltage	DC 24V	Nominal
Adjustment range	24-28Vdc	Factory setting 24.5
Output power	Continuous: 600W Up to +45°C ambient 500W At +55°C ambient 350W At +70°C ambient Short-term, up to 5s: 1000W Below +55°C ambient 700W At +70°C ambient Derate linearly between +45°C to +70°C	
Number of outputs	2	
Output 1 current	Settable per output; up to 20A	
Output 2 current	Settable per output; up to 12A	

FPT500.241-002-107:

Power Supply with **Built-in Decoupling MOSFET** for parallel and redundant applications.

SHORT-FORM DATA

Output voltage	DC 24V	Nominal
Adjustment range	24-28Vdc	Factory setting 24.5
Output power	Continuous: 600W Up to +45°C ambient 500W At +55°C ambient 350W At +70°C ambient Short-term, up to 5s: 1000W Below +55°C ambient 700W At +70°C ambient Derate linearly between +45°C to +70°C	

Built-in Decoupling MOSFET for 1+1 and n+1 Redundancy

23. Application Notes

23.1. REPETITIVE PULSE LOADING

Typically, a load current is not constant and varies over time. This power supply is designed to support loads with a higher short-term power demand (=BonusPower®). The short-term duration is hardware controlled by an output power manager and is available on a repeated basis. If the average load is higher than the nominal output power, the output voltage will dip.

To avoid this, the following rules must be met:

- The power demand of the pulse must be below 200% of the nominal output power.
- The duration of the pulse power must be shorter than the allowed BonusPower® time. (see output section)
- The average power should be lower than the nominal output power.

The R.M.S. output current must be below the specified continuous output current. If the R.M.S. current is higher, the unit will respond with a thermal shut-down after a period of time.

23.2. EXTERNAL INPUT PROTECTION

The device is designed, tested and approved for branch circuits up to 20A (UL) and 32A (IEC) without additional protection device. If an external fuse is utilized, do not use circuit breakers smaller than 6A B- or C-Characteristic to avoid a nuisance tripping of the circuit breaker.

23.3. TWO PHASES OPERATION

No external protection devices are required to protect against a phase-loss failure.

Two phase operation is not recommended for this power class since the supplying 3-phase network can become unbalanced. However, if one phase fails, the unit may still work if the load is below the power limit shown in Fig. 23-1.

A long-term exceeding of these limits will result in a thermal shut-down of the unit.

During power-on, some start-up attempts can occur until a permanent output power is available. EMC performance, hold-up time, losses, and output ripple differ from a three phase operation. Such use is not included in the approval according to UL61010 and IEC62368.

Fig. 23-1: Two phase power capability

23.4. INDUCTIVE AND CAPACITIVE LOADS

The unit is designed to supply any kind of loads, including capacitive and inductive loads. If extreme large capacitors, such as EDLCs (electric double layer capacitors or "UltraCaps") with a capacitance larger than 100mF are connected to the output, the unit might charge the capacitor in the Hiccup^{PLUS} mode (see chapter 6).

23.5. BACK-FEEDING LOADS

Loads such as decelerating motors and inductors can feed voltage back to the power supply. This feature is also called return voltage immunity or resistance against Back- E.M.F. (Electro Magnetic Force).

This power supply is resistant and does not show malfunctioning when a load feeds back voltage to the power supply. It does not matter whether the power supply is on or off.

The maximum allowed feed-back-voltage is 35Vdc. The absorbing energy can be calculated according to the built-in large sized output capacitor which is specified in chapter 6.

23.6. MOUNTING ORIENTATIONS

The device can be mounted in various mounting orientations. The listed lifetime and MTBF values from this datasheet apply only for the standard mounting orientation. The following curves give an indication for allowed output power in different mounting orientations for altitudes up to 2000m (6560ft).

A
Standard Orientation

B
Upside down

C
Over-head mounting
