## Product revision LOCC-Box from 12/15/2021

Over the past few years, you have purchased electronic current control systems of the LÜTZE LOCC-Box series. Thank you for the trust you have placed in us.

As part of our efforts to continuously develop and optimize our product portfolio, we have further optimized the LOCC-Box system with regard to installation ease, connection technology and control cabinet performance. Specifically, the new LOCC-Box offers the following improvements:

- Push-In connections instead of cage clamps (2.5mm<sup>2</sup> with or without wire ferrules, all standard crimp patterns are possible)
- Additional 2 mm test opening for your measuring instruments
- Improved stability on the hat profile
- The heights of the components have been enhanced
- More LED functions that indicate differences between the target and actual settings.
- The front plates are now labeled in blue instead of white

Most importantly: nothing changes for you! All LOCC-Box types still have their original item numbers, and your current purchasing conditions also remain unchanged. Also, the previous LOCC-Boxes are compatible with the new version and the accessories will still be delivered as usual.

## Switchover schedule:

IV	Part-No.
1/2022	716401, 716401.0050, 716410, 716410.0050
2/2022	716400, 716415.0300, 716419.0300, 716409, 716406, 716717.xxxx, 716412.xxxx, 716408, 716413, 716403, 716404, 716411, 716418, 716414, 716416.001.1, 716416.002.1, 716416.003.1, 716448, 716420

Please do not hesitate to contact us if you have any questions or if you need solutions for any problems. We look forward to continuing our successful business relationship.

Best wishes and stay safe,
