

SWITCH MODULE

DCM 010 | DC 20 to 56 V

- > High DC switching capacity
- > Variety of applications

- > Wide DC voltage range
- > Simple connection

The switch module is used to control DC powered devices with high capacities in control and switch cabinets. It is controlled via an external potential-free contact (thermostat or hygrostat), which is connected between terminal 3 and 4. It must be ensured that the external contact is suitable to switch the required signal current without any problems.
